

VC: value\_column  
DC: dictionary\_column  
RC: reference\_column

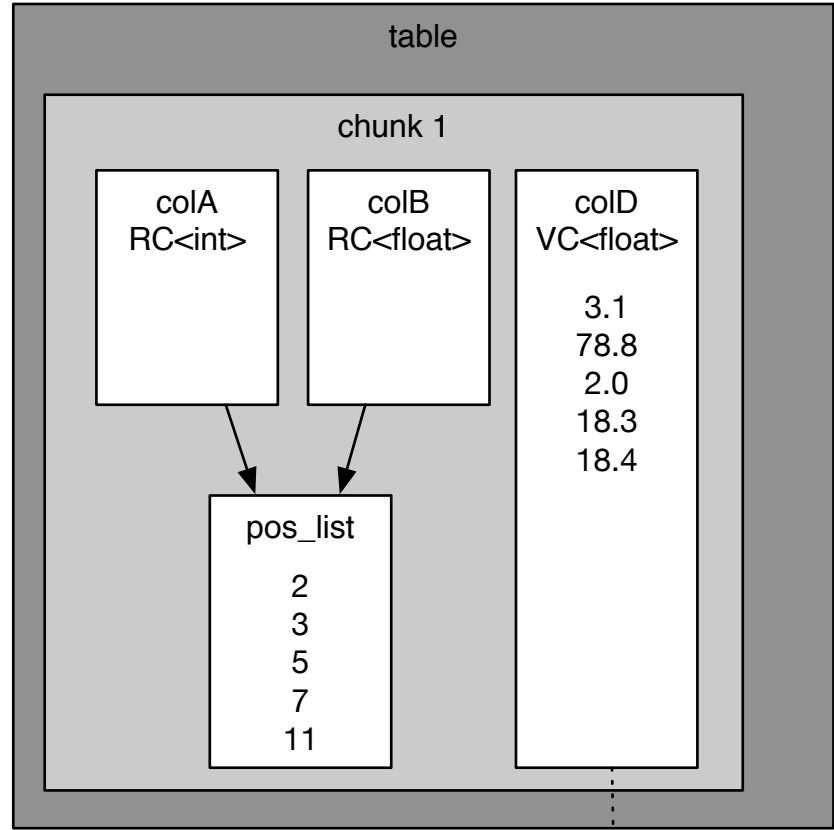

table\_scan(.., "colA", ">=", 5)

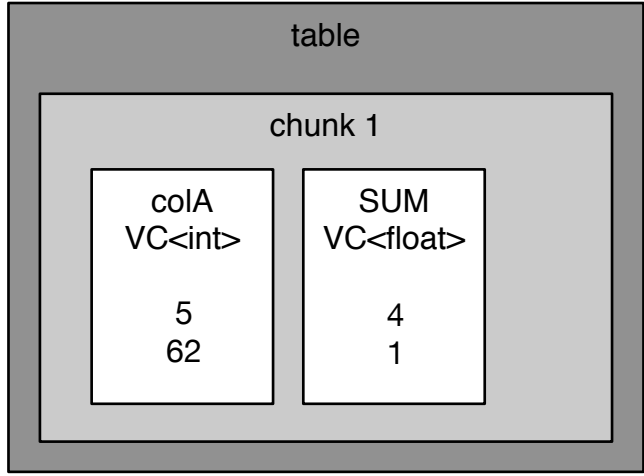

projection(colA, colB)

new colD: colB+1

COUNT(colB) GROUP BY colA

TODO: add max size of pos\_lists and potentially multiple chunks

In the current model, this value column could potentially hold more entries than the regular max size of a chunk
